EDUCATION

•Bachelor of Technology in Computer Science and Artificial Intelligence

2024-28

Banasthali Vidyapith

CGPA: 7.88

PERSONAL PROJECTS

•PatternLog 🗄️ 🔗

A Chrome Extension for DSA Practice Tracking

- Built a Chrome extension to track and analyze LeetCode DSA practice by categorizing problems into core algorithmic patterns.
- Implemented content scripts to dynamically detect problem metadata from LeetCode pages and communicate with the popup using Chrome message passing APIs.
- Designed a state-driven popup UI enabling users to save problems, mark confusing questions, and maintain a revision list with persistent storage.
- Used Chrome Storage API (storage.local) for efficient, offline-first data persistence across browser sessions.
- Integrated topic-wise analytics to identify weak areas by aggregating confusing problems using hashmap-based frequency counting.
- Applied UX-focused state management, including controlled enable/disable flows for inputs and actions to prevent inconsistent data updates.
- Debugged and resolved real-world asynchronous issues involving storage callbacks, message timing, and UI state synchronization.
- Technology Used: JavaScript, Chrome Extensions API (Manifest V3), Content Scripts, Chrome Storage API, HTML, CSS

•MeetOn 🗄️ 🔗

A full-stack, real-time video communication platform engineered with the MERN Stack and WebRTC.

- Architected a real-time communication system using **Socket.io** and **WebRTC**, enabling seamless peer-to-peer video streaming and low-latency data exchange.
- Enabled a secure and scalable **REST API** with **Node.js** and **Express**, handling user authentication, room management, and session validation.
- Designed a highly responsive frontend with **React.js** and **Material UI**, utilizing **React Context API** for efficient global state management across components.
- Engineered core video call features including mute/unmute, camera toggle, and screen sharing by manipulating **MediaStream** APIs directly.
- Modeled a robust **MongoDB** database schema to efficiently store user profiles and meeting logs, optimizing data retrieval speeds.
- Technology Used: MongoDB, Express.js, React.js, Node.js, Socket.IO, WebRTC, Material UI.

TECHNICAL SKILLS AND INTERESTS

Languages: Java, Javascript, SQL

Web Dev Tools: Nodejs, VScode, Git, Github, Render, Postman

Frameworks: ReactJs, ExpressJs

Cloud/Databases: MongoDB, Relational Database(mysql)

Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming, Database Management System, Software Engineering.

Areas of Interest: Web Design and Development

Soft Skills: Problem Solving, Self-learning, Presentation, Adaptability

ACHIEVEMENTS

•2nd Runner Up, NexHack 1.0 2025

•Top 20% Finalist, Smart India Hackathon (Internal) 2025

•Gold Badge (5 Stars) in Java on HackerRank 2025
